

Web Applications

I specialize in crafting captivating and user-centric web application designs that seamlessly Blend aesthetics with functionality. With a keen eye for detail and a deep understanding of user experience principles, my work focuses on creating intuitive and visually appealing interfaces. By combining the latest design trends, responsive layouts, and effective information architecture, I strive to enhance user engagement and drive positive interactions. My design process involves collaborative brainstorming, wireframing,prototyping, and iterative refinement to ensure that the end result not only meets the client's objectives but also delights and satisfies the end users. Through my work in web application design, I aim to transform complex ideas into user-friendly digital experiences that leave a lasting impact.

✓ Empathy Maps	✓ Logo / Brochure Design	❖ Adobe Photoshop CC
✓ Story Board	✓ Visual Design	❖ Adobe Illustrator CC
✓ User Centered Design	✓ HTML / CSS / SASS	❖ Adobe Flash
✓ User / Usability Research	✓ Bootstrap	❖ FIGMA
✓ User Interaction Design	✓ JavaScript (DOM)	❖ Dreamweaver
✓ UX / UI Design	✓ jQuery	❖ Visual Studio Code
✓ Wireframe / Prototyping	✓ ReactJs	
✓ Web / Mobile App Design		

#1: CRIS(Clinical Research Information System)

About the project:

The Clinical Trials application is meant to serve several diverse groups within SJCRH. At a high level, the Clinical Trials application provides services to track patients, protocols, therapies and results for each of these groups. The main goal is to minimize the time it takes to implement new Clinical Trials applications while providing such services for multiple user communities.

Each group can share a common underlying database managed via a user interface customized to the needs of each group. Individual components of the user interface can be shared among services. Supporting the user interface will be a common business logic layer. This layer manages the interaction between the user interface and the database. In addition, the business logic layer contains all application specific logic. Overlaying the database, the business logic and user interface is a security system that controls who can use the services and what data they can manage. This design provides not only application reusability, but a single source of data for all services that thereby eliminates duplication of data among multiple systems while securely managing the data. **Application Developed in:** Java1.6, Spring, Cocoon, XML, XSLT, Jsp, EJB, Postgres

#2: SRM(Shared Resource Management System)

About the project:

This Module is a part of SRM1.x. Resource Scheduler serves different purposes at SJRCH. There exist two types of resources namely a Resource, which can be an instrument that is used by technicians or users and the other is Technician Resource, which is the Human Resource who provides assistance in using a Resource. Two kinds of Administrators exist here one is Local Administrators and the other is Lab Administrators. Local Administrators can book a resource for a particular date and time period (Hourly basis). If a resource is booked then it must not be made available to other administrators i.e. local administrators when a particular resource is booked for a time period then the local administrators can see the booking details of the resource and it is made unavailable for that particular time period.

Local administrators cannot modify the bookings where as Lab administrators can. Two types of services exist here technician-assisted usage and unassisted-usage. Local administrators can only book a resource with the help of technician i.e. technician-assisted usage. Lab administrators can also book a resource without the help of technician i.e., unassisted-technician- resource. Lab administrators has priority in booking a resource over local administrators. Application developed in Java1.6, Spring Framework, Hibernate, JSP, Tomcat, Oracle

#3: SRM(Shared Resource Management System)

About the project:

The SRM 2.0 (Shared Resources Management) is an application that that manages shared resources across St. Jude Children's Research Hospital. Applicatio developed in Java1.6, Spring Framework, Hibernate, JSP, Tomcat, Oracle, AntJava1.6, Spring, Hibernate, Ibatis, JMS(ActiveMQ), Liquibase, Gradle, Freemarker, Prototype, Postgres, Selenium(RC and Webdriver) jUnit, Jmock, Jenkins, Tomcat, Jira and Crucible.

- Ordering of Shared Resource services, tracking the status of those orders, and retrieval of data generated by these services. Enables laboratory staff to retrieve orders and sample information submitted by investigators, initiate and track processes and workflows on samples, manipulate and archive resulting data.
- Affiliate App comes in handy in the absence of the Driver or when the company wants to share their drivers with company. Provide billing support to generate invoices for services rendered.

#4: PALLAS

About the project:

Pallas is an application developed for computational resources, data and process management. Pallas workflow engine allows users to link together the execution of commands and run them on various systems in the high performance.

Computing facility using the Sun Grid Engine(SGE) environment without having to learn the details of SGE. The Pallas system is designed to help the researchers on the client side to create and run workflows. Executing a workflow in turn executes components. A component is a logical unit of work that can consists of one or more commands. These commands are executed sequentially. Application developed in Java 1.6, Spring, JPA, PostgreSQL, JavaScript, Jquery, DOJO and Ajax.

#5: PCGP data portal(Pediatric Cancer Genome Project)

About the project:

In January 2010, St. Jude Children's Research Hospital and Washington University School of Medicine in St. Louis, announced an unprecedented effort to identify the genetic changes that give rise to some of the world's deadliestchildhood cancers. The team joined forces to decode the genomes of more than 600 childhood cancer patients.

The St. Jude Children's Research Hospital – Washington University Pediatric Cancer Genome Project is the largest investment to date aimed at understanding the genetic origins of childhood cancers. Scientists involved in the projectare sequencing the entire genomes of both normal and cancer cells from each patient, comparing differences in the DNA to identify genetic mistakes that lead to cancer.

PCGP data portal:
PCGP data portal is a public portal that is meant to show the research data collected by the researchers working on theGenome project mentioned above. Healthy and cancer effected tissues are examined using genome sequencing techniques to generate data from various patients under investigation. Application developed in Java 1.6, Spring, JPA, PostgreSQL, DOJO and Ajax.Spring 3.0, hibernate 3.0,Freemarker

#6: TrakIT

About the project:

Publication of St Jude research findings represents a key asset to this institution. TrakIT serves as a "central databasehousing all St. Jude publications". It allows St. Jude affiliated authors to manage one's publications list and assignshared resource usage involvement in one's publications. This information is critical as it enhances the overall management of St. Jude publications and facilitates the production of reports, CCSG renewals, etc. It also tracks the usageof Shared Resources in scientific publications published by St Jude investigators.

Users are able to view, edit (controlled by role-based access), and generate reports on St Jude publications as well as Shared Resource usage in support of those publications. The system also provides export capabilities that enable usersto export data into Reference Manager and Endnote applications.

It is anticipated that the information maintained here will be useful for Shared Resource Directors and others when they prepare periodic grant renewals and other kinds of reports. TraKIT System is enabled to automatic data import from external publication sources. Application developed in Java1.6, Spring, Hibernate, FTL, PostgreSQL, Junit, Selenium, Jquery, Jenkins, Liquibase, Gradle, Jira and Crucible.

#7: Mouse Colony Management System(MCM)

About the project:

The objectives of Mouse database is to keep an accurate inventory of mice in colonies, Maintaining a breeding colony ofmice is one method of generating and then ensuring an available supply of experimental subjects with desired characteristics. Although mice breed readily when left to themselves, it is helpful to have a working knowledge of reproductive physiology to obtain optimal results. In addition, accurate record keeping and a familiarity with standard terminology for the designation of mouse strains help ensure that the genetics of the research mouse was intended.

Instantly generate data about pedigrees, Search the colonies for mice that meet a variety of criteria, including age andsex, and laboratory data. Set up a multi-user network with appropriate access an authorizations. Application developed in Grails, Groovy, YUI, STS 2.x IDE, Postgres, Tomcat, Jenkins, Liquibase, Gradle, Jira and Crucible

- Mouse Database will maintain records of Mice Colonies, Litter Information, Mouse Information.Reporting.
- Application menu consists of Admin- Available only if the user is in the Admin group, Users-, this is where admin user configures user accounts, Groups- this where admin user configures groups, Report-, this is where admin user publishes reports, Audit- displays database audit. Colonies-Add New, this is where new Litter records are added to the database, Search- this is where usercan search for Litter and Mice data

#8: Everspring (everspringpartners.com)

About the project:

Everspring is a full-service, customized online educational solutions provider. They partner with leading universities looking for innovative online solutions to enable their vision and further their mission. Working alongside university leaders, Everspring helps develop a mission-consistent strategy for starting or expanding their partners' online programs.The partner defines their admissions and academic standards, and retains control of critical academic functions — including admissions decisions, content creation, defining learning outcomes, faculty hiring and faculty engagement.
Everspring then provides a range of customized services and support that brings a rich, end-to- end online learningexperience to life and builds new capabilities for the university.

Each of Everspring's engagements is "built for purpose" and customized to meet their partners' unique goals andneeds. The solutions share common approaches to key challenges, and work is based on the organization's four core principles.
Application developed in JDK1.7, Spring 3.2, Jersey1.17, Hibernate 4.0, MongoDB 2.6, Amazon AWS

#9: Transcript Evaluation App (TEA) for GCU

About the project:

- TEA Application is designed to ease the transcript evaluation process followed at Grand Canyon University

  (GCU).Mainlydesigned to evaluate Transcripts, Institutions and Courses.

- It builds data for future evaluations such as Course Mappings and Category Mappings. Report- this is where user can launch areport, Exit- this menu item will return the St. Jude Children's Research Hospital Intranet home page.

- This application supports manual and automated process. In manual process users can enter the data through screens. In auto-mated process data can be uploaded in the form of XML, CSV, and PDF files.

- EA application functionality is categorized based on roles – DEO (Data Entry Operator), IE (Institution Evaluator), IEM (InstitutionEvaluation Manager), DEM (Data Entry Manager), SLE (Student Level Evaluator), Lopes, Lopes Supervisor, Admin, DS (Document Scanner), Program Specialist.

- Applications Developed in JDK1.7, Spring 3.2, Jersey 1.17, Hibernate 4.0, MSSQL DB, AngularJS.

#10: Student Information System for GCU

About the project:

The Student Information System involves migration, improvements and customization ofvarious components at GCU aslisted below.

- Degree Progress Audit
- The Degree Progress Audit (DPA) is performed by GCU staff in the Office of Academic Records for the purpose of verifying the com-pletion of degree requirements for an individual student. The tool needs to be useful to verify completion or to identify any gaps.

- Student scheduling and re entry
- When student comes back to take program in GCU, our system automatically calculates and creates the schedule of courses to betaken and automates the reentry process.

- Student academic records
- This involves handling Transcript generation, Attendance, Grades, GPA, SAP, Degree audit w/ "what if" scheduling, Request leave ofabsence, Student holds, Grievance/dispute management, Reuse/Equivalency/Sub-pools.
- Application developed in JDK1.7, Spring 3.2, Jersey 1.17, Hibernate 4.0, MSSQL DB, AngularJS

#11: Unisource

About the project:

Unisource/Vertivcorp is one of the largest independent distributors and marketers of more than 150,000 national and private-label products, including commercial printing and business imaging papers, facility supplies and equipment, and packaging materials and equipment in North America. They offer a comprehensive suite of customer solutions in the industry. They also offer Logistical expertise and eBusiness technologies to other 3PL companies. They work both as a shipper and a logistics provider.

This requirement is written to implement the functionality of B2C services provided by the Unisource/ Vertivcorp helping the customer find right price quote for their cargo transportation and along with this major functionality customer will also be able to perform various activities as mentioned in the FR scope section. Application developed inJDK1.6, Spring-mvc:3.1.0, Sping-security:3.1.0, Spring-webflow:2.2.1, freemarker:2.3.20,CSS, Jquery-1.9, Axis-1.4,jersey-json:1.17, Lambdaj2.3.3, iText5.0.6, Hibernate3.6, javax.mail:mail:1.4.1, org.apache.poi:poi:3.8, org.slf4j:slf4j-log4j12:1.7.5, Gradle1.0, Spring-Jdbc:3.1.0, SQL Server-2012, Tomcat Server-6.0 or Higher, MGI Webservices

#12: SellVideo

About the project:

Designed and developed a website to build Dynamic CMS for CISCO to make the CISCO products demo available for the cisco employees and partners. Total website is dynamic including images, content and menu, Worked with Bootstrap tomake the site responsive. Application developed in Ruby on Rails,mysql, Jquery, Java Script, Ajax

Worked with Elastic Search Implementation, Cron job implementation, Mailer and implemented total CMS for project so that admin users can design total website as they want. worked on auto complete feature, pagination, carrierwave imageuploader, friendly id, axslx to import and export data to excel. Worked in a dedicated environment and reached all goals set by client in tight schedule.

#13: HelpUddaanom.org

About the project:

Designed and developed HelpUddaanom.org as part of CSR activity. Total website is dynamic including images, contentand menu, Worked with Bootstrap to make the site responsive. Worked with Elastic Search Implementation, Cron job implementation, Mailer and implemented total CMS for project so that admin users can design total website as they want. worked on auto complete feature, pagination, carrierwave image uploader, friendly id, axslx to import and exportdata to excel. Worked in a dedicated environment and reached all goals set by client in tight schedule. Application developed in Ruby on Rails, mysql, Jquery, Java Script, Ajax

#14: APEPDCL - PMS

About the project:

APEPDCL had decided to develop an application for the APEPDCL construction engineers to monitor the progress of all the construction works with dashboard visibility for review and monitoring. The software is such that it can be viewed bythe management of APEPDCL, Quality Control Engineers and Vendors who are executing the work.

The Scope of Service provider is to provide APEPDCL a Comprehensive Project Monitoring Tool along with a MIS system. The scope of service shall include the installation, operation, implementation, and support of an integrated informationsystem for monitoring of the different projects of the APEPDCL across the Distribution Company. Application developed in JDK1.6 or Higher, Spring-mvc:3.1.0, Sping-security:3.1.0, freemarker:2.3.20,CSS, Jquery-1.9, jersey-json:1.17, Hibernate3.6, javax.mail:mail:1.4.1, org.apache.poi:poi:3.8, org.slf4j:slf4j-log4j12:1.7.5, Gradle1.7, Spring-Jdbc:3.1.0, Oracle 11g, Tomcat Server-7.0 or Higher.

#15: 9DRW.UK

About the project:

It is an e-commerce shop with responsive theme and built in a frame work of Drupal content management system. Andthe home page of the site primarily contains category, menu, Promotion sliders for advertising the latest and upcomingproducts and Jcarousel slider with quick tabs which is showing most popular products, New arrivals and promotions, Footer with site information, store information and socail media links.

9DRW Commerce is a joint venture between three individuals, who combined have all the experience needed in the threemain areas when creating an online shop.

The goal of this service is that we understand the frustration when creating an online shop, the hours that is required tomake sure everything is working correctly, the hours photographing merchandise, editing and uploading images of mer-chandise, along with so much more. Application developed in Drupal, PHP, MySQL, Apache, HTML, CSS, Javascript, JQuery

#16: Moran Insurance Solutions

About the project:

It is an Insurance agency site with responsive theme and built in a frame work of Drupal content management system Moran Insurance & Financial Solutions is an independent insurance agency serving the entire state of Florida with officelocations in Ponte Vedra Beach, Vero Beach and Maitland, FL. Their mission is to connect client with an Insurance Program or Financial Solution that makes good business sense.

Moran Insurance and their team of licensed insurance specialists offer a large range of insurance solutions. They offer a variety of personal, business and group insurance programs to fit your exact needs. Insurance solutions such as, Florida homeowners insurance, auto insurance, commercial general liability, worker's compensation and commerican property in Ponte Vedra Beach, Palm Valley, Atlantic Beach, Jacksonville, Orlando, Tampa, Miami, Maitland and Vero Beach and all other cities in the Sunshine State. Application developed in Drupal, PHP, MySQL, Apache.

#17: Collectorw8s

About the project:

Collectorw8s is an e-commerce shop with responsive theme and built in a framework of Drupal content managementsystem.

Home page of the site primarily contains two main categories(paperweights and books), menu, Promotion sliders for advertising the latest and upcoming products, Footer with site information, store information and supported paymentmethods.

It is selling paperweights with no of unique paperweight designs and selling books that are related Annual Bulletin ofthe Paperweight Collectors Association.

Even the products stock turned to sold, we can find an option called "request more information" about that product. Application developed in Drupal, PHP, MySQL, Apache, HTML, CSS, Javascript, JQuery.
